```java
1 //53. Create a class Car with attributes brand and
  model. Create an object of this class and print the
  details.
2 class Car {
3     String brand;
4     String model;
5
6     public Car(String brand, String model) {
7         this.brand = brand;
8         this.model = model;
9     }
10
11     public void printDetails() {
12         System.out.println("Brand: " + brand + ",
  Model: " + model);
13     }
14
15     public static void main(String[] args) {
16         Car myCar = new Car("Toyota", "Camry");
17         myCar.printDetails();
18     }
19 }
20
```
